Bring Home Europe's Finest

BEKO

Intelligent Solutions for Everyday Life

International Reach

Welcome to the world of Beko home appliances, where functionality and efficiency blend in full harmony. Beko is the international household appliances brand of Arçelik Group which is the 3rd biggest household appliances manufacturer in Europe. Its products are sold in 107 countries worldwide and supported by an international network of 367 authorized distributors and 18,000 employees worldwide.

Intelligent Solutions

Beko home appliances are designed to deliver intelligent solutions to all your domestic needs - from cooling, cooking, washing and cleaning to air-conditioning or entertainment. Not only do we use intelligence in our products, but also at every contact point with our customers, from design to packaging, from distribution to sales.

Quality Products

Beko has won several international awards for quality, design and functionality worldwide. Not surprisingly, every day more than 25,000 consumers buy Beko products around the world. There are currently more than 250 million satisfied Beko customers across the globe and we hope you are next.

Welcome to the world of BEKO!

Intelligent Air Conditioners

BEKO

4 Reasons to buy
Beko Air Conditioners

1- Energy Saving

Energy Saving Function
Beko Air Conditioners are designed to be energy efficient to save your money.

Sleep Mode
Under Sleep mode, the air-conditioner will automatically increase tempretures (cooling) 10* c per hour, or decrease 20* c (heating) per hour. The set tempreture will be stable within 2 hours. With the sleep function, the machine can maintain the most comfortable tempreture and save energy.

Timer Function
With this function you can save energy by programming your air-conditioner to shut down when you don't need it or alternatively you can program your air-conditioner to operate before you come home so that you can enjoy your cool living room as soon as you step in.

2- Air Quality

Active Carbon Filter
It can help to absorb many kinds of bad odours such as ammonia (NH3) and inactivates harmful chemical gases. This filter can also help to absorb small dust particles, smoke and prevent allergic disease.

Anti-Bacteria Filter
The easy to wash anti-bacteria filter catches most small dust particles in the air, as well as prevents bacteria reproduction and makes the indoor atmosphere healthy.

3- Comfort

Low Noise Airflow System
With the optimized air duct and the large diameter cross flow fan, the indoor noise can be reduced considerably without decreasing the airflow, thus providing a quiet and comfortable environment for the user.

Independent Dehumidification
This feature is usually used on rainy days or in damp areas. By operating in cooling mode or fan only mode, the unit can achieve comfortable humidity for the user without lowering the room tempreture.

Hot Start
In heating mode, fan speed is controlled according to evaporator tempreture. Only when the evaporator's tempreture is warm enough, the fan begins to operate, preventing any cold blasting.

4- Convenience

Numerical Display On the Indoor unit
Full function LCD, LED or Numerical displays help the user monitor and operate the unit clearly and easily.

LCD Remote Control
All functions of the air-conditioner can be controlled by the LCD remote control.

New Line

Inverter Line

Cassette Range

	0.75 Ton	1 Ton	1.5 Ton	2 Ton
Btu/h	9000	12000	18000	24000

- Anti-Bacteria Filter
- Low Noise Air Flow System
- Independent Dehumidification
- Hot Start
- Anti-Corrosion Cabinet
